

There is a little setting up involved as the keyswitches for 8dio Century Brass does not come preloaded. They default to a customizable interface, so in order for the Expression Maps to work, these articulations need to be load in this specific order for each instrument. Once loaded, you can save this as the default preset for the instrument and you will not have to load/reorder them again unless you want to change them later for a different project. Here are pictures of each instrument preset. Note, not all brass samples have muted variants. The keyswitches are only added to those who which are applicable.

Hope this helps, and happy writing!
